

# DanMagi's Single Sign-On

Service Feature

# DanMagi

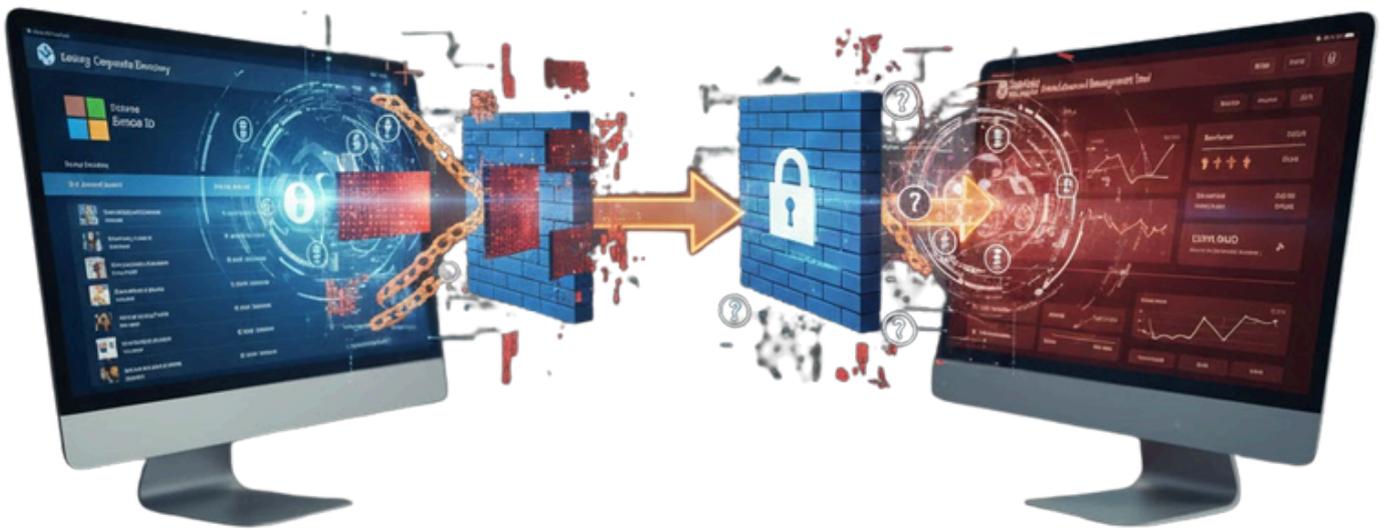

➤ All your Wi-Fi Needs - in one place!

# Efficiency is the New Luxury

In a five-star environment, speed and precision are everything. Your team shouldn't be slowed down by the very tools meant to empower.

Managing a constellation of disparate login credentials isn't just an administrative headache — it's a significant security liability.

DanMagi's SSO integration for **Thunderbeam** bridges the gap between your existing directory and our backend management tool, turning authentication from a hurdle into a **seamless, invisible handshake**.

# The Cost of Fragmented Identity

From administrative headache to a security liability.

## The “Shadow IT” Risk

When staff juggle multiple passwords, they write them down, reuse them, or use insecure “workarounds” that bypass your protocols.

## The Off-boarding Nightmare

In an industry with high mobility, a single forgotten “active” account for a former employee is an open door to your guest data.

## Password Fatigue

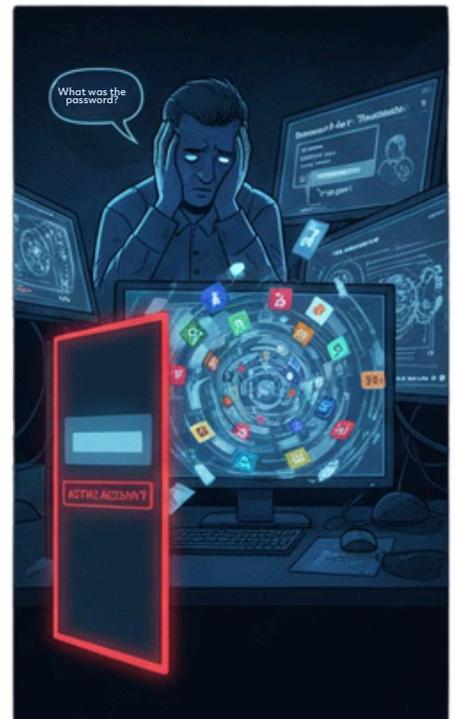

Every minute an IT Manager spends resetting a “forgotten password” for the Thunderbeam portal is a minute lost to high-value infrastructure projects.

# Unified Control, Absolute Security

With DanMagi SSO, you transform your security posture — **You don't just manage logins; you manage trust.**

## Total Ecosystem Harmony

Users access Thunderbeam via their existing enterprise credentials (e.g., **Microsoft Entra ID**). If they are logged into their workstation, they are ready to work.

## Instant Lifecycle Management

When an employee joins or leaves, their access across the entire stack — including Thunderbeam — is provisioned or revoked instantly. **No orphaned accounts, no manual cleanup.**

## Inherited Ironclad Security

Leverage your existing investments in **Multi-Factor Authentication (MFA)** and complex password policies. Our integration adopts your rules, ensuring Thunderbeam is as secure as your core network.

## Zero-Friction Operations

Eliminate login friction for your staff, allowing them to focus on guest excellence rather than credential management.
