Support Add-Ons?

Need better network visibility or support? DanMagi makes managing your network simple and stress-free.

- Advanced Network Monitoring
- Guest Network Monitoring
- Admin Network Monitoring
- Guest Network Support (Remote)
- Admin Network Support (Remote)

Compatibility

DanMagi is a cloud-based service, however, to ensure that connectivity across all locations and regions is consistent or even possible, we do require a communication server to be connected on site.
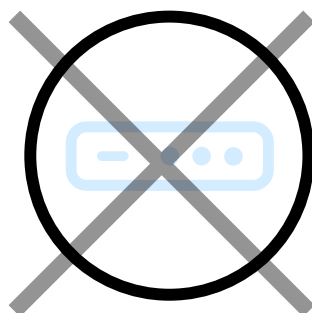

What do I need?

★ This is called a "Thor server" and we use this to connect each customer to the cloud along with providing additional networking benefits depending on each customer's setup.

Public or Private IP Addresses are required for the Thor Server to get internet access. We prefer Public IP addresses for complete service level support however we can operate differently depending on any customer limitations.

— No other equipment is needed

Our DanMagi service is completely network agnostic.

We are compatible with all Wi-Fi Suppliers with a broad amount of networking experiences shared across our engineering team.

COST EFFECTIVE

HOW DOES IT WORK?

A most typical setup will see the network setup as below.

The **DanMagi Thor Server** acts as a firewall but we are able to set up in a multitude of configurations

— ensuring the most ideal set up for each customer.
